

USP45 Tactical Pistol Caliber .45 ACP

*USP45 Tactical Pistol with sound suppressor
 and Universal Tactical Light (UTL)*

An enhanced version of the standard USP45, the Heckler & Koch USP45 Tactical Pistol is designed for users who require the features of the HK MK23/Mark 23 pistol for tactical, combat, or CQB use in a smaller and more affordable package.

Unique features include an improved single action and double action trigger pull, adjustable trigger stop, and a longer threaded barrel for attachment of muzzle mounted accessories, such as sound suppressors or muzzle compensators.

The HK USP45 Tactical Pistol answers the call from the user community for a smaller yet capable pistol in caliber .45 ACP with an acceptable level of performance less than the larger MK23.

The threaded barrel incorporated in the design of the USP45 Tactical combines the barrel threading and patented rubber O-ring system proven successful in the MK23 pistol produced by HK for the U.S. Special Operations Command.

The O-ring acts as an "environmentally friendly" barrel bushing for improved accuracy without loss of reliability while operating in harsh environments or when the weapon becomes excessively

fouled or laden with debris. This O-ring is proven in tests to last up to 24,000 rounds and can be replaced by the user in seconds and without tools.

*USP45 Tactical Pistol with
 Universal Tactical Light (UTL)*

The USP45 Tactical Pistol is rated for use with +P ammunition and incorporates frame mounting rails for installing accessories like the quick detachable HK Universal Tactical Light

(UTL). A compact and powerful weapons light, the UTL can be easily mounted without tools in seconds.

Available in nine trigger/firing mode variants, the USP45 Tactical can be converted in minutes by an armorer into single action only, double-action/single-action or double action only with the frame mounted control lever on either side of the weapon, with or without safe or decock positions.

This control lever functions and is positioned just like that of the M1911 pistol yet allows the slide to be retracted even when set in the safe position. The magazine release is ambidextrous and the slide release is extended as a standard feature on the USP45 Tactical Pistol.

No special tools are required to disassemble or assemble the weapon and as no custom fitting of parts is required. All parts in the USP45 Tactical are totally interchangeable between pistols.

The proprietary HK Hostile Environment (HE) finish protects the surfaces of the pistol from wear and corrosion, including salt water corrosion.

USP45 Tactical Pistols are available with fixed or adjustable sights, with or without self-luminous tritium sight inserts.

TECHNICAL SPECIFICATIONS

CALIBER:	.45 ACP
OPERATION:	Short recoil with mechanical recoil reduction system
FEED DEVICE:	12-round metal box magazine
MODES OF OPERATION:	Single Action Only, Double Action/Single Action, Double Action Only. (See chart)
FINISH:	Proprietary HK "Hostile Environment" (HE) finish. Wear and corrosion resistant.
SIGHTS:	3-dot. Click adjustable rear sight for elevation and windage or fixed sights. Optional tritium sights available.
WEIGHT (ounces):	31.37 - fixed sight, 32.00 - adjustable sights
LENGTH (inches):	Barrel - 4.92 inches Overall - 8.64 inches
HEIGHT (inches):	5.60 - fixed sights, 5.78 - adjustable sights
WIDTH (inches):	1.26
FRAME:	Fiber reinforced black polymer
